WORLD MILK PRODUCTION FOR 1974 UP NEARLY 2 PERCENT

Worldwide Summary

Recovery of New Zealand's milk production and exports after the 1973–74 drought, the recent turnabout of the U.S. dairy situation from deficit to surplus, and continuing expansion of European Community (EC) milk output are key factors in the current world dairy situation.

The growth of world milk output slowed considerably in 1973, largely due to unfavorable feed conditions in the developed countries, where, for the first time in many years, milk yields per cow declined. However, this decline was offset by larger cow numbers, up about 1.5 percent. Overall, for 36 important countries for which data are available, 1973 milk production was up nearly 1.5 percent, compared to nearly 2.5 percent in 1972. Production this year promises to gain nearly 2 percent.

The short-term outlook calls for a further increase in milk production in state-trading countries and a more pronounced rise in output in Western Europe. In the USSR and Europe, dairy cow numbers at the beginning of 1974 were over 2 percent above those of a year earlier. The growth in numbers was particularly rapid in Poland and in the EC. (Growth was especially rapid in Ireland, the Netherlands, and France, but cow numbers and production were down in the United Kingdom.) Providing weather conditions are normal, milk production in Europe and the USSR in 1974–75 should rise at least at the same rate as cow numbers have increased. In New Zealand a return to normal weather could result in as much as a 10 percent increase in milk output in 1974-75. With milk production in developing countries continuing to be of relatively small importance, output in 36 major countries in 1974 is expected to total about 772 billion pounds. This upward trend in world milk production—between 1 to 2 percent annually—is expected to continue in 1975, assuming normal weather for pastures and feed crops.

Prices

Outside the United States and Canada, and to some extent, the United Kingdom, worldwide price rises for feedgrains are likely to have limited impact upon milk production, because milk cows are fed only small amounts of grain concentrates in Europe and virtually none is fed in New Zealand and Australia. In these areas, roughages, such as pasture (mostly grass), hay, and silage are more important feedstuffs for milk cows. Also, the worldwide drop in meat and cattle prices helps boost short-term milk production, because the reduced salvage value of a mature cow discourages culling of milk cow herds. In the longer run, lower beef prices may encourage veal production at the expense of raising dual purpose cows for meat and milk.

World prices of most dairy products were beginning to rise seasonally by late 1974. However, this was not necessarily an indication of strong markets, because internal prices of milk and principal dairy products in most industrialized countries are supported, directly regulated, or otherwise influenced by Government or quasi-Government policy. Price supports were raised during the past year, and the following levels are in effect at the beginning of the 1974–75 marketing year: The United States, manufacturing grade milk, $6.57 per hundred pounds, up from $5.61; Canada, milk, including manufacturing, and including earned subsidies, $C9.41 up from $C8.50; and EC, all milk, delivered plant $7.34, up from $6.74. The EC price is a Community-wide average based on the value of units of account expressed in U.S. dollars. Individual country price levels differ from the average depending on currency fluctuations.

In early October, a 5 percent increase in the EC milk price support for the 1974–75 marketing year was announced. The new price supports for milk now range from a high of $9.50 per hundred pounds in West Ger-

many to a low of $7.22 in the United Kingdom and Ireland.

Since the protection of farmers' incomes is an important consideration in most price support systems, continuing worldwide inflation practically assures further increases in world dairy support prices in 1975–76.

Free market prices, independent of regulatory systems, are probably best indicated by prices for butter and milk powder exported by New Zealand to destinations other than the United Kingdom, which buys butter under a special EC arrangement through the end of 1977).

NEW ZEALAND: BUTTER AND NONFAT DRY MILK EXPORT PRICES, 1968–74
(In cents per pound)

Date	Butter, f.o.b. NZ		Nonfat dry milk f.o.b. NZ

[1]Estimated.

Reports from the major countries indicate that cheese consumption continues to grow, following trends of the past several years. Until recently, butter consumption has been falling, but this year the high price of vegetable oils has made butter more competitive with margarine, and the downward trend in butter consumption may be interrupted, although perhaps only temporarily.

Production

North America

For the first time since September 1972, U.S. milk production in July, August, and September 1974 moved above levels for the previous year, with increased yield per cow more than offsetting the 2 percent decline in cow numbers. However, high feed prices may cause a downturn in production later this year. For all of 1974, milk production may be about 1 percent below 1973's 115.6 billion pounds. The tight U.S. supply situation for manufactured products, which resulted in sharply increased imports of dairy products in 1973 and early 1974, has reversed itself, and in recent months the Commodity Credit Corporation has been buying dairy products under the price support program. Consumption of fluid milk products in January–July 1974 totaled almost 5 percent below that of a year earlier, primarily in response to higher prices and falling real consumer incomes. Storage stocks of dairy products increased sharply this spring and summer, and are well above year-earlier levels.

In **Canada**, the projected 1974 milk production is up marginally—almost 1 percent—from the 16.9 billion pounds of 1973. On August 1, target support prices to producers were raised from $C8.50 per hundred pounds of milk to $C9.41, including direct subsidies, for milk produced without quota. The 1974 production level is expected to generate significant quantities of nonfat dry milk for export and for contribution to the World Food Program, although Canada has been a consistent net importer of butter in recent years.

Mexico, the third largest North American milk producer, is expecting production to increase by about 1 percent in 1974, to 12.5 billion pounds.

South America

Most of the six countries for which production estimates are available show little change from 1973 output. However, **Argentina's** milk output may show a 9 percent increase from the 1973 level of 13 billion pounds, and **Columbia's** production is likely to rise 5 percent from almost 6 billion pounds last year.

European Community

Despite springtime dry weather that was especially discouraging in the **United Kingdom**, the EC countries are increasing milk output in 1974—possibly to 218 billion pounds, up from 212 billion pounds in 1973. Although output in the United Kingdom and **Ireland** may be down as much as 2 percent in 1974, about a 4 percent rise is likely in **Belgium** and **France**, 2 percent in **West Germany**, and a 7 percent gain may occur in the **Netherlands.**

The 1974–75 EC dairy year opened April 1 with an average support price equivalent to $7.34 per hundred pounds for 3.7 percent butterfat milk delivered to plants. (In dollar terms, this figure varies from country to country, depending upon current individual currency relationships). A further increase of 5 percent, as agreed upon in October, brings the average EC support price to $8.10. While stocks of manufactured products are accumulating seasonally under the price support intervention program, European authorities did not consider those stocks unwieldy. As of September 1974 EC dairy stocks in 1,000 metric tons with 1973 data in parentheses were as follows: Butter, 341 (421); cheese, 237 (232); and nonfat dry milk, 250 (168).

Although down in the United Kingdom, trends in milk cow numbers were up in Ireland, the Netherlands, and France. Cow numbers are less clear-cut in other countries because of the dual purpose nature of cattle. However, it is expected that lower prices for slaughter cattle in the short run will delay the culling of milk cows and thus sustain production in the EC. For example, January–June output in France—the EC's largest dairy

producer—was 4 percent above that of 1974. Only in the United Kingdom—where domestic production is principally oriented to the fluid market—is there concern about possible seasonal shortages, which are expected at year-end.

Other West European Countries

Milk production in these countries this year will probably total about the same as the 42 billion pounds produced in 1973. None of the countries are indicated to have large changes in output; a decline in milk output in **Sweden** is about offset by an increase in **Greece.**

East Europe and the USSR

Six of the 8 countries in this group are expected to show increases. In the **USSR,** milk production in 1974 may increase about 4 percent, reaching 200 billion pounds, following a 5 percent increase the preceding year. Total USSR milk output is approaching the EC level and considerably exceeds U.S. milk output.

As a group, the East European countries and the USSR are expected to produce about 285 billion pounds of milk in 1974—about 3 percent more than that of a year earlier. Output in 1973 was in turn 4 percent above that of 1972.

Oceania

New Zealand has recovered from the drought which reduced 1973–74 production, but **Australia** still feels the effect of adverse 1973 conditions, which included both flood and drought. Australia also is experiencing difficulties resulting from the rationalization of its dairy industry through the elimination of Government subsidies. Output this year is expected to decline by about 3 percent.

New Zealand and Australia are the world's most consistent exporters of manufactured dairy products, and the restoration of normal supplies will increase import pressures on many countries which normally use imports to supplement domestic production. The expected increase in New Zealand's production, perhaps as much as 10 percent (i.e. 1.3 billion pounds), seems small relative to world output, but is very significant in relation to world dairy trade since New Zealand accounts for about one-third of total world dairy exports.

In **Japan,** the previous upward trend in milk production leveled off in 1973, and output is expected to decline in 1974. A decline in the number of cows and high feed prices are expected to continue this trend. Imports have increased, but the drop in production is not likely to be fully offset by imports because of the nation's policy of maintaining a high degree of self-sufficiency in dairy product use.

UNITED STATES CONTINUES TO BE NET DAIRY PRODUCT IMPORTER IN FISCAL 1974

World milk production increased again in fiscal 1974 by about 2 percent, but U.S. output continued to decline to levels experienced in the early 1950's. Corresponding to this decline were larger imports of butter, cheese, and nonfat dry milk. U.S. import quotas for these products were increased sharply in fiscal 1974. The value of U.S. dairy exports fell by 35 percent in fiscal 1974, while imports increased by 126 percent, leading to a $392 million deficit in trade in dairy products—the largest on record.

Milk available for manufacturing in the United States declined however, while the quantity used for cheese production expanded because of greater demand and higher prices. These shifts caused a marked decrease in milk available for butter and nonfat dry milk output. For the first time, the United States in fiscal 1974 became a net importer of butter and nonfat dry milk, both of which previously had been substantial export items.

Exports

Exports were limited by domestic supplies and totaled only $49.2 million in value, compared to $75 million in fiscal 1973. The previous uptrend in shipments of evaporated milk and dry whole milk to Canada was reversed, while sales of these items to Mexico rose.

Butter exports to Canada fell from $2.1 million in value in fiscal 1973 to negligible amounts in fiscal 1974. The total quantity shipped from the United States to all destinations fell 75 percent, from 4.65 million pounds to 1.16 million in fiscal 1974.

Nonfat dry milk exports dropped 94 percent in value from $35.5 million in fiscal 1973. Tight supplies reduced shipments of nonfat dry milk under PL 480 and other food aid programs to negligible levels.

Cheese exports increased 37 percent from $5.5 million in fiscal 1973 to $7.5 million in fiscal 1974. Higher export values accounted for much of the increase although larger volumes, especially to Canada, also were significant. The value of U.S. cheese exports to Canada increased almost 45 percent over that of the previous fiscal year.

Imports

The value of dairy imports for the last fiscal year reached a record $441.3 million, up 126 percent over the previous fiscal year's level. This substantial increase in imports continues to reflect falling U.S. milk production, decreased output of butter and nonfat dry milk, and greater consumer demand for cheese. Increased import authorizations (some of which were not completely filled) were allowed in order to help alleviate the tight supplies of dairy products. Butter equivalent quotas were increased by 84 million pounds, cheddar cheese quotas by 100 million, and nonfat dry milk quotas by nearly 330 million pounds. In addition, all cheese import quotas were increased by 50 percent during the period April 1 –July 31, 1973. However, except for American-type cheese, only about 75 percent of the quota increases were filled.

Nonfat dry milk imports increased in value to $107.1 million in fiscal 1974, compared to only $26.4 million in fiscal 1973. The European Community's (EC) market share increased from 38 percent to 49 percent as their shipments increased by 116.3 million pounds. The share for the remaining market was about divided evenly between Canada, New Zealand, and Australia.

Cheese imports nearly doubled in the last fiscal year, reaching $234.7 million. The EC continued to supply about half of the total, while New Zealand, Switzerland, Austria, Finland, and Canada provided most of the remainder. Cheddar cheese imports increased by over 700 percent, reaching a total value of $73.3 million. Swiss cheese imports grew by 77 percent and were valued at $53.6 million. "Other cheese" imports grew about 38 percent and totaled $63.3 million in fiscal 1974.

August 1974

UNITED STATES BECAME NET IMPORTER OF DAIRY PRODUCTS IN 1973

U.S. milk production declined 3.5 percent in 1973, resulting in the lowest annual output since 1952 as well as a pronounced shift in the pattern of imports and exports of dairy products. The value of exports fell by two-thirds while that of imports nearly doubled, leading to a $270 million deficit in trade in dairy products—the largest such deficit on record.

Milk available for manufacturing declined. The quantity used for cheese production expanded because of greater demand and higher prices. This increase caused a marked decrease in milk available for production of butter and nonfat dry milk. For the first time, the United States in 1973 became a net importer of both butter and nonfat dry milk, which had previously been substantial export items.

Exports

Exports were restricted by limited domestic supplies and totaled $48.7 million in value, compared to $140.8 in 1972. The uptrend continued in shipments of evaporated milk and dry whole milk and also in fresh milk sales along the border of Canada.

Butter exports to Canada totaled 2.9 million pounds, 40 percent less than in 1972. The total quantity shipped to countries other than Canada fell about 98 percent, from 38.7 million pounds to less than 1 million pounds in 1973.

Nonfat dry milk exports dropped over 90 percent from $78.2 million in 1973. Tight supplies also curtailed 1973 shipments of nonfat dry milk under P.L. 480 and other food aid.

Cheese exports increased by more than 20 percent from $5.2 million in 1972 to $6.3 million in 1973. Higher export values accounted for much of the increase, although larger volumes, especially to Japan, were also significant.

Imports

The value of dairy product imports reached a record $318 million in 1973, up 90 percent over the previous year's level. This substantial increase in imports reflects falling U.S. milk production, decreased output of butter and nonfat dry milk, and greater consumer demand for cheese. Increased 1973 import authorizations were allowed in order to alleviate the tight supplies of dairy products. Butter equivalent quotas were increased by 84 million pounds, cheese quotas by 64 million, and nonfat dry milk quotas, by over 265 million pounds.

Nonfat dry milk imports increased in value to $87 million in 1973, compared to only $360,000 in 1972. The European Community became a supplier for the first time, providing more than half the total quantity imported. Another third came from Canada, and the remainder from New Zealand and Australia.

Cheese imports continued to expand in 1973, reaching $150 million in value—up 36 percent from those of 1972. The EC supplied about half of the total, while New Zealand, Switzerland, Finland, Austria, and Canada provided most of the remainder. Cheddar imports more than doubled in 1973, reaching a total value of $11.5 million. Swiss and "other cheese" imports grew about 50 percent, totaling $43.4 million and $55.8 million, respectively.

WORLD BUTTER AND CHEESE PRODUCTION UP AGAIN IN 1973

Butter production in 35 major producing countries totaled 11.2 billion pounds in 1973, an increase of 2 percent over that of 1972.

In Western Europe butter production totaled 4.4 billion pounds, up 3 percent from a year earlier. Western Europe's production represents 39 percent of the total world output. This increase resulted from high milk production in the first half of 73, as production of milk and dairy products fell in the latter part of 1973 because of dry weather conditions.

The nine members of the European Community (EC) increased butter production about 3.5 percent from that of 1972. This increased output continues to cause great concern in the EC as well as in third countries. Certain measures have been taken to subsidize the use of EC butter in domestic programs and for export. Domestic subsidies have been placed on butter for sale to institutions, the military, and consumers, but the largest removal came from the 1973 sale of 200,000 metric tons of EC butter to the USSR at the equivalent price of 20 U.S. cents per pound.

Eastern Europe's production has also continued to increase—output in 1973 was above the 1972 level. In the USSR, the largest single producer of butter, 1973 output is estimated at almost 3 billion pounds, an increase of 14 percent over that of the previous year. A return to normal weather and pasture conditions was largely responsible for the sharp upturn in Soviet production.

In Oceania butter production decreased by 3 percent as a result of the serious drought which prevailed in both New Zealand and Australia during periods of 1973.

Cheese production in 33 major producing countries was 12.5 billion pounds—up about 2 percent over the 1972 level. All major producing areas showed increased outputs of cheese. In Western Europe a record 6 billion pounds of cheese was produced. The EC increased production to 4.9 billion pounds—about 1 percent above 1972.

Preliminary data indicate that cheese production in the Soviet Union increased over 10 percent, compared with the previous year, reaching a record 1.2 billion pounds.

In Oceania cheese output rose 5 percent, despite drought conditions. Australian production increased about 30 million pounds, more than offsetting the decrease in New Zealand's cheese output.

World cheese stocks at the end of 1973 are estimated to be down about 2 percent from the previous year's record high. High prices during 1973 for most meat products resulted in a recovery in cheese consumption and exports.

WORLD TRADE IN DAIRY PRODUCTS DOWN IN 1972

World trade in dairy products in 1972 was down 11 percent from 1971. On a whole-milk-equivalent (butterfat) basis, total shipments from major dairy exporting countries, including trade among the European Community (EC–6)[1], totaled 55 billion pounds, down from 62 billion in 1971.

Decreased trade was reported for all dairy products except cheese and dry whole milk. Trade in butter, including intra-EC trade, was 1.4 billion pounds, down 19 percent from 1971; evaporated milk was down 10 percent; condensed, 26 percent; and nonfat dry milk, 12 percent. Trade in cheese increased by 5 percent with dry whole milk up 2 percent.

New Zealand again was the leading exporter of dairy products on a butterfat basis, followed by the Netherlands, Denmark, Australia, and France.

Butter

Total world trade, exclusive of intra-EC trade, decreased to 1.2 billion pounds in 1972, down 22 percent from the previous year. The decline in Europe's trade in butter for 1972, coupled with expanding production and decreasing demand, caused a rapid accumulation of butter stocks. Owing largely to the reduction in butter exports from the EC-6, the Western European countries total declined in 1972.

Exports from West Germany, France, Belgium, and the Netherlands declined by 64 percent, 58 percent, 24 percent, and 11 percent, respectively.

Within the group of Western European countries outside the EC, Denmark reversed the downward trend of the past 5 years in butter exports, with a 13 percent increase in 1972. Ireland expanded exports by 17 percent, along with increases from Austria, Norway, and Sweden. Exports from the USSR declined by one-third from the 1971 level.

Australia's butter exports decreased by 38 percent, while New Zealand exported slightly less than in 1971.

[1]Consists of Belgium, France, West Germany, Italy, Luxembourg, and the Netherlands.

Cheese

At almost 1.7 billion pounds, world cheese trade in 1972 increased by 5 percent over 1971, continuing an uptrend that started in the early 1960's. France replaced the Netherlands in 1972 as the largest cheese exporter, increasing exports by 22 percent to 348.7 million pounds. Most of this increase was accounted for by greater shipments within the EC-6 and to the United Kingdom. French exports to the United States increased from 8.3 million pounds in 1971 to 12.9 million in 1972. France accounted for 21 percent of the total world cheese trade in 1972, compared to 18 percent a year earlier.

The Netherlands exports increased by 1 percent in 1972 to 342 million pounds, accounting for 21 percent of world trade in 1972, the same proportion as a year earlier. Larger shipments to the United Kingdom and to other members of the EC-6 offset smaller exports to most other areas including the United States.

New Zealand remained the third largest cheese exporter, although shipments declined by 4 percent. Exports to the United Kingdom, New Zealand's largest customer, declined by 15.5 million pounds, more than offsetting substantially increased exports to Japan and the Union of South Africa. New Zealand's shipments to the United States, at 13.2 million pounds, were comparatively unchanged.

Australia's cheese exports in 1972 were 13 percent below a year earlier, largely reflecting smaller shipments to the United Kingdom. Japan remained Australia's most important destination, and increased imports from Australia by 26 percent to 31.1 million pounds.

Dry whole milk

World trade in dry whole milk in 1972 totaled 531.3 million pounds, 2 percent above 1971. Substantial declines occurred in exports by Belgium, Denmark, and the Netherlands. In contrast, France increased shipments by 93 percent over 1971 and emerged as the leading exporter. About half of the increase in French exports consisted of larger shipments to other members of the EC-6, while most of the balance reflected unusually large ex-

ports to Chile. Finland increased exports of dry whole milk by 36 percent, with the USSR continuing as the primary destination. Exports from the United States increased by 59 percent, mainly by virtue of greater shipments to Japan and other Asian destinations.

After emerging as the leading importer of dry whole milk in 1971, Chile dropped to second position in 1972, changing positions with the USSR. The United Kingdom was the third largest importing country in both years.

Nonfat dry milk

World trade in nonfat dry milk in 1972 decreased by 12 percent to slightly less than 2 billion pounds. West Germany replaced France as the world's largest exporter, accounting for about 21 percent of world trade. Even so, West Germany's exports declined by 9 percent. Exports from France decreased by 24 percent, from the United States by 21 percent, and from Canada by 52 percent. Among the larger exporters, only New Zealand increased exports of nonfat dry milk in 1972, with an increase of 23 percent to 343.4 million pounds.

Italy and the Netherlands remained the two largest importing countries, obtaining most of their supplies from elsewhere in the EC-6. In 1972, Mexico increased imports for the fourth consecutive year and ranked as the third largest importer of nonfat dry milk, followed by Japan.

Evaporated whole milk

Total world exports of evaporated whole milk declined by 10 percent in 1972. The Netherlands remained the largest exporter, accounting for 74 percent of total world trade in evaporated whole milk, although Dutch exports were 7 percent below a year earlier. This decrease reflects smaller total imports by the Philippines, Ghana, and the United Kingdom. Exports from France decreased by 3 percent as a result of smaller shipments to other EC partners. The United States increased total exports, with Mexico the primary destination followed by the Bahamas.

Condensed whole milk

World exports of condensed whole milk, continuing a downward trend, totaled 265.4 million pounds in 1972, 26 percent below the 1971 figure. Most destinations shared in this decrease. Exports from the Netherlands and France, the principal exporters of condensed whole milk, decreased by 19 and 32 percent, respectively. Only Australia showed an increase in exports in 1972.
